

I Claims:

1. An improved structure of a diffusing film and prism film in LCD screen mainly relates to using general optical fiber array to substitute for the structure of a diffusing film and prism film in LCD screen; said general optical fiber array is combined with the plural of short general optical fibers to be slices in an identical direction.

2. An improved structure of a diffusing film and prism film in LCD screen according to claim 1, wherein the general optical fiber array is substituted by one optical micro-fiber array.
